Reconfiguring The Global Economy: Globalization, International Trade And Applied Economic Perspectives

Guest Editor:

**SAIDI Hicham, PhD in
Economics and Management
from the FSJES in Meknès,
Morocco**

Email: saidihicham4@gmail.com

SPECIAL EDITION OVERVIEW

This special edition explores the profound transformations reshaping the global economy and their implications for globalization, international trade, economic development, and public policy. It welcomes theoretical, empirical and econometric research examining changing patterns of international trade, global and regional value chains, competitiveness, investment, economic integration and the evolving structure of the world economy.

It gives particular attention to emerging and developing economies, especially African economies, and to empirical evidence on how technological, energy, geopolitical, and structural transformations affect international economic relations and development trajectories.

BACKGROUND AND RATIONALE

The reconfiguration of global trade, the transformation of global value chains, digitalization, energy and industrial transitions, and successive international shocks are reshaping the conditions under which economies participate in global markets. This special edition seeks to advance applied economic research that connects rigorous theoretical frameworks with empirical evidence and policy-relevant analysis.

PAPERS IN THE FOLLOWING ACADEMIC DISCIPLINES ARE WELCOME :
