Peer Review Procedure

Single blind.

Publication Fee

To cover the operating costs, authors of the
accepted papers will be required to pay 97 EUR per
paper. Hard copies of the ESJ special edition are
included as part of the cost.

Overview of the Special edition

As the Globe at large is faced with the COVID-19 pandemic, it is imperative that adequate and timely measures are taken to contain the spread, especially in the event of a similar breakout. The state of Health Care Delivery System no doubt plays a significant role in curbing the spread of infection outbreak. Many nations, especially those in the developing and poor regions of the world are finding it difficult to meet up with their populations demand for health care needs. This hinderance has been attributed majorly to scarcity of both capital and human (well-trained healthcare personnel), technological backwardness, over dependent on foreign aids and misappropriation of public funds, Consequently, many of these countries are worst hit at the outbreak of communicable diseases, especially such that could have been easily contained where such health care facilities are effective and adequate.

As we are celebrating the ESJ 10th anniversary, we found it imperative to address these shortcomings in the health care sector. Our aim of this topic is to address the significant roles of Institutional Preparedness towards Effective Health Care Delivery System. Papers in this Special Issue can use a variety of research methods. The suggested themes include, but are not limited to the following:

1. Government Policy, Spending, and State of Health Care Delivery System
2. Population Health Care Needs and Nation's Carrying Capacity
3. Data Quality and Health Care Planning
4. Social Stratification, Institutional Bureaucracy and Disparities in Health Care Delivery
5. Primary Health Care and Human Wellbeing

Types of Manuscripts Acceptable

Original articles, empirical review of literature, meta-analysis and conceptual framework
