Comments and Suggestions to the Author(s):

Dans votre conclusion le volet preventif de la mastite puerperale n'est pas exhaustif; il consiste également à inhiber la production lactée chez les accouchées ayant perdu leur nouveau nés ou ayant eu des avortements tardifs par différentes méthodes et l'hygiène du mamelon avant et après chaque allaitement entre autre.

Dans la prise en charge, la greffe autologue nécessite une main entraînée ou un chirurgien plasticien; dans notre pratique nous avons obtenu une régénérescence spontanée de la peau du sein quoique tardive dèsfois.

Comments and Suggestions to the Author(s):

Il s'agit d'un sujet très interessant qui met en exergue les réalités africaines en matière de pathologies mammaires puerpérales. L'auteur devra apporté plus de precisions

dans la méthodologie, des chiffres et pourcentages dans les résultats pour parfaire son manuscrit
